

Klinge, V.; Lachar, D.; Grisell, J., and Berman, W. Effects of scoring norms on adolescent psychiatric drug users' and nonusers' MMPI profiles. *Adolescence*. 1978 Spring; 13. 13(49. 49): 1-11.

The present study compared the effects of scoring norms on adolescent psychiatric inpatient drug users' and nonusers' MMPI profiles. The results indicated that regardless of drug usage or non-usage the application of adolescent norms yielded less pathological profiles than did the use of adult norms. A further finding was that Scale O, Social Introversion, is the only clinical scale from differentiated users' from nonusers' profiles.
